

# S/P2<sup>®</sup>

Just \$225 to train everyone in your school facility or campus.

In the automotive industry, employees work under lifted loads every day as they navigate the shop floor working on vehicles. The **Automotive Lift Institute** has developed "Lifting it Right: School Edition" to show students the correct way to operate an automotive lift to reduce the risk of injury and/or property damage. This 45-minute online course is available **exclusively** through S/P2. An **annual subscription is just \$225**, and allows you to train ALL students under one roof for one full year.

## WHAT'S INCLUDED?

### Section 1: The Most Common Lift Types

This section covers 7 common lift types, including 2-post surface mounted, multi-post runway, drive-on parallelogram, scissors, inground, mobile columns and low/mid-rise frame-engaging lifts.

### Section 2: Preparing to Lift

Vehicles often fall from lifts because of operator error while preparing to lift a vehicle. This section covers the safety steps necessary before using a lift.

### Section 3: Lifting and Working Under a Vehicle

This section talks about what to do when raising a vehicle, and additional safety considerations before starting to work on a vehicle.

### Section 4: Lowering the Lift

Before lowering a lift, there are some specific safety items to consider, such as clearing everything out from under the vehicle and not leaving the lift unattended.

### Section 5: Maintaining the Lift

One of the key reasons vehicle lifts fail is the lack of inspection or maintenance. This section discusses how delaying maintenance is a dangerous safety shortcut.

### Section 6: Conclusion, Resources and Final Exam

This section reviews the key concepts learned in the course, and includes the final exam. After passing the final, the user can print a certificate of completion.
